WORKSHEET 2 - TAFLEN GWAITH 2
Task 1 (Part A, B, C) – SUB 1

PART A

The Video

https://www.youtube.com/watch?app=desktop&v=G4H1N_yXBiA

Intended use of this video

The intended use of the video is to inform us about what climate change is and how it negatively affects our planet. It explains the causes of climate change like how the increase of greenhouse gases from humans like burning fossil fuels and shows how these changes lead to rising global temperatures an increase in extreme weather events and disrupts ecosystems in the wild. The video also tells us the impact on us humans, including threats to the health and communities as well as the effects on wildlife like changes in migration patterns and increased risk of extinction. The video goes further by telling us that it is possible to take action against climate change.

Features used

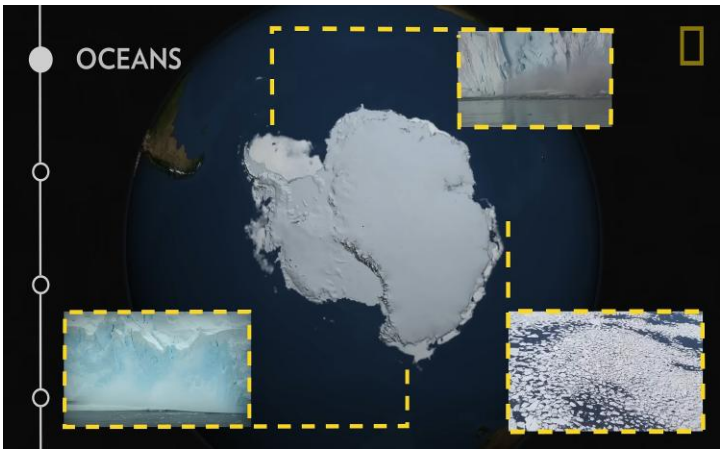
- The video used various features such as videos to demonstrate the topic being mentioned like for example when talking about how ice across Antarctica is melting due to climate change a video was featured showing this effect from various locations.

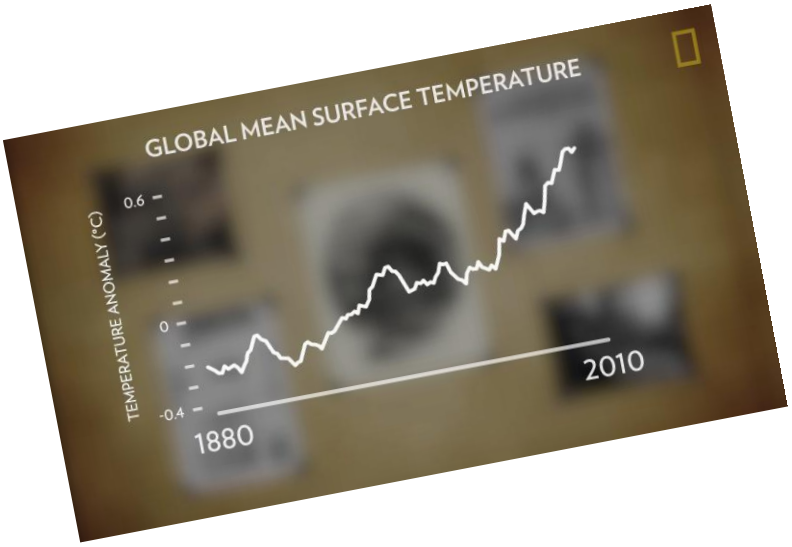
- Another example is when discussing how earth's temperature has been gradually increasing since the late 1800s, a graph is given for the user on the screen to showcase the increase in an easier way, it simplifies complex information allowing the audience to better grasp the seriousness of climate change.

- The video also makes use of YouTube's timestamp feature, in order to separate each topic into a different "chapter" which is convenient if the user would like to skip to a specific topic and it makes navigating the video quicker, especially if they want to review specific sections later.

- This video also includes a bar on the left side, with the four main topics of the video, ocean, weather, food and health which are listed and highlighted if the video is going over that specific topic, this is useful for overall convenience and provides a clear sense of progression throughout the video.

Screenshots of the features





Is the video suitable for purpose

Yes, the video is suitable and does a good job at illustrating the devastating effects climate change can and will have on our planet if things do not improve, the various features used such as timestamps, charts and clips is convenient and does a good job at getting the point through, overall together these elements work together to ensure that the information is accessible and impactful for viewers

The Website

http://www.apple.com

Intended use of this website.

The intended use for Apple's website is to promote and showcase all of their latest and older products, of course with a particular focus on their latest releases, such as the iPhone 17 Series and the 3rd Generation Air Pod Pros. The website allows users to explore detailed information about each product the including the features, the capabilities, and the professionally designed 3d showcases to assist potential buyers understand what each device can do. Also, the site serves as a central hub for support, so it's offering tutorials, troubleshooting guides and other resources to help users make the most of their Apple devices. So, this website is designed to both market Apple's products and provide practical info and assistance for their customers.

Features used

- **High quality and professional photography**

  Apple uses high quality photography on their latest products and ensures that they stand out in order to enhance user focus and draw attention, the images are carefully designed and crafted extremely well to highlight the design and unique features of each device, on some page's you're are able to interact with the images allowing you to rotate the device.

- **Product Comparison Page**

  The site has a feature that allows you to compare products with a side by side table in a way that is clearly structured and understandable, each category is grouped into their own section and users can customize the products in the comparison at any time, and once changed the page will instantly update without needing to refresh.

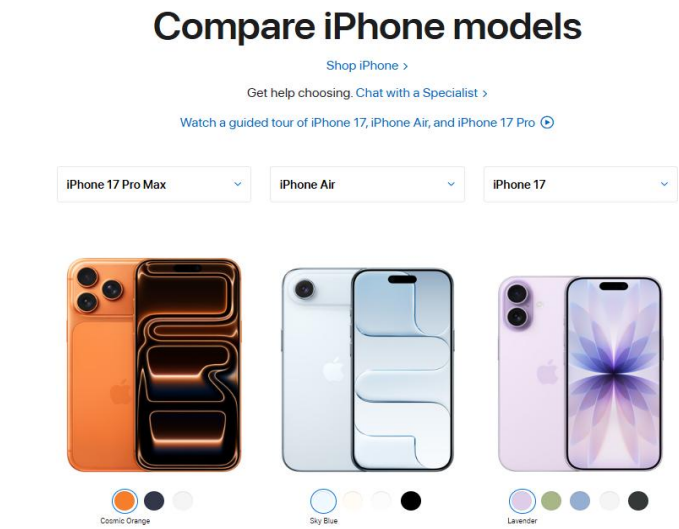
- **Online 3D Product Demonstration**

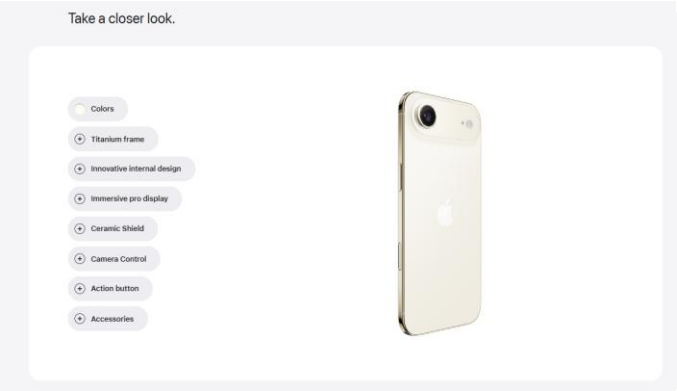
For Apple's latest series of iPhone, they've included the ability for you to get a close-up demonstration using a 3D model of the iPhone, showing what it's capable of and the features included, such as the display, ceramic shield and its internal design, users are able to rotate, zoom in and examine the phone from all angles.

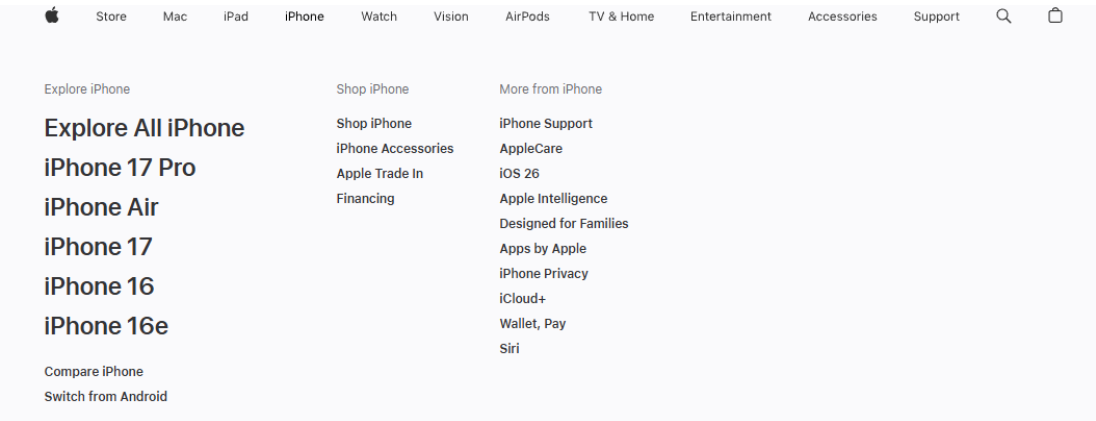
- **Seamless and Intuitive Navigation**

Apple's website features a clean navigation system that allows users to easily find what they're looking for. The top navigation bar uses obvious categories with dropdown menus that provide fast and easy access to product lines, and the smooth scrolling will create a fluid browsing experience without cluttering the screen.

Screenshots of the features







Is the website suitable for purpose

Yes, the Apple website is definitely suitable for its purpose. It effectively promotes and showcases Apple's entire product line-up whilst having a special focus on the latest releases. The site provides users with detailed product information and high-quality visuals with interactive features such as 3D models and side by side comparisons that help customers make decisions. Also, it serves as a support hub offering resources like tutorials, user guides, and troubleshooting assistance for all of their products.

Part B

The Video

https://www.youtube.com/watch?app=desktop&v=G4H1N_yXBiA

Does the video suit it's audience

Yes, the video suits it's intended audience well. It presents complex information about climate change in a clear way like using visuals like graphs, video clips and easy to understand explanations. These features help engage the people watching including people who may not have a science background. Also, the use of timestamps and chapter divisions allows viewers to navigate the content for their own interests which is making it convenient for both casual viewers and those wanting more detailed information. Overall the video is effective for reaching and educating its target audience about the importance of understanding climate change.

What is the intended effect of the video

The intended effect of the video is to raise awareness about climate change, its negative impacts on the planet and to encourage viewers to take action to combat it. The video gets this by using fancy visuals, clear explanations, and useful examples of solutions. The use of real-life footage, graphs, and organized chapters helps make the information easy to understand which will keeps viewers engaged and motivated to learn more. So, the video effectively informs and inspires its audience to recognize the urgency of climate change and maybe help in addressing it.

The Website

http://www.apple.com

Does the website suit the intended audience

Apple's website is designed to suit its intended audience, which is made up of people who are interested in technology, value good design, and want clear information about products. The site uses high quality photos that show the products in detail and users can interact with some images by rotating the device which makes it easier to see what they are buying. The product comparison page allows users to compare different devices side by side, with each section organized so it is simple to understand the differences. The online 3D product page lets users zoom in and rotate the phone to explore features like the display the ceramic shield and internal design which helps people understand what the product can do. So overall yes, the website provides the information, visuals and tools that Apple's audience expects.

What is the intended effect of the website

The intended effect of Apple's website is to make its products look appealing and to provide information about their features and let users compare and buy them. The website achieves this through high quality photos that highlight the design and interactive images that let users rotate and view the devices closely and a product comparison page that clearly shows differences between models. The 3D product page also allows users to examine the phone they've chosen from all angles which increases interest if the user has interest in it's design. The clear and simple navigation also makes it easy for users to find products their support or services without getting lost. Overall, the website successfully promotes Apple's products and provides an engaging and easy to use experience which does meet its goal of attracting potential customers.

Part C

The Video – Advantages and Disadvantages

https://www.youtube.com/watch?app=desktop&v=G4H1N_yXBiA

Advantages

1. **Raises Awareness and Encourages Action**
Beyond explaining the problem, the video has possible solutions and actions that people and communities and governments can take to combat climate change. This helps viewers feel informed and empowered, promoting awareness and motivating positive behaviour toward protecting the planet.

2. Engaging Visuals and Presentation
Through high-quality visuals, cool animations, and fancy graphics, the video has key points and keeps viewers interested. These visual elements make cool concepts like rising temperatures or habitat loss in our environment easier to comprehend and more memorable.

3. Clear and Informative
The video explains what climate change is, how it happens and its effects on humans and wildlife in a way that's easy to understand. It breaks down complex science into simple explanations which is making it suitable for a wide audience, including students and the public like us.

Disadvantages

1. Short Duration
The video is relatively short, so it can't cover all aspects of climate change in detail. The important topics like impacts on different regions, the impacts to the economy and long-term effects are only mentioned slightly or left out entirely. This limits the scope of information given and may leave the viewers with an incomplete understanding of the full damage of climate change.

2. Limited Depth
While the video provides a clear overview of climate change and the damage it will do, it does oversimplify some details on science. People who are looking for more in-depth explanations or data or technical information may find the video is lacking here, which could make it less useful for advanced learning or detailed study.

3. Short-Term Impact
Although the video is probably great at raising awareness, it's a single resource and may not result in long-term changes in behaviour or a good understanding of climate change. Without additional info or follow up resources or discussions the viewers might forget a lot of information or fail to apply what they have learned in useful ways.

The Website – Advantages and Disadvantages

http://www.apple.com

Advantages

1. Useful Information and Support
Apple's website provides detailed information about each product, including the specs for devices, features and tutorials. It also offers troubleshooting guides and support resources making it a useful hub for both new customers and existing users who need help with their devices.

2. Marketing and Promotion
The website effectively promotes Apple's latest products with visually appealing content and clear messaging. Special launches, product highlights and featured content help attract attention and encourage customers to consider purchasing new devices.

3. Product Comparison Feature:
The website allows users to compare different Apple products side by side in a clear and organized table. This helps customers easily see the differences in specifications and features, making it easier to choose the product that best suits their needs.

Disadvantages

1. Focused on Promotion

The website is mainly designed to showcase and sell Apple products, so it will feel overly promotional and be biased toward the brand. Users looking for fair comparisons or complaints may not find what they need, as the site only focuses the positive aspects of Apple devices and doesn't talk about potential drawbacks or limitations like the horrendous pricing.

2. Overwhelming Amount of Options

With many products, feature, and interactive UI elements some users may find the website cluttered or confusing to navigate easily. New customers or people unfamiliar with Apple's range may struggle to locate specific information quickly or compare products effectively.

3. Less Detailed Technical Information

Although the site provides basic specifications like GPU and CPU, it focuses more on design, features and looks rather than actual in depth technical details. More technical users or professionals may find the information is lacking here, for making detailed comparisons, accurate performance assessments or confident purchase decisions.
