WORKSHEET 1 - TAFLEN GWAITH 1
Task 1 (Part A) - Tasg 1 (Rhan A)

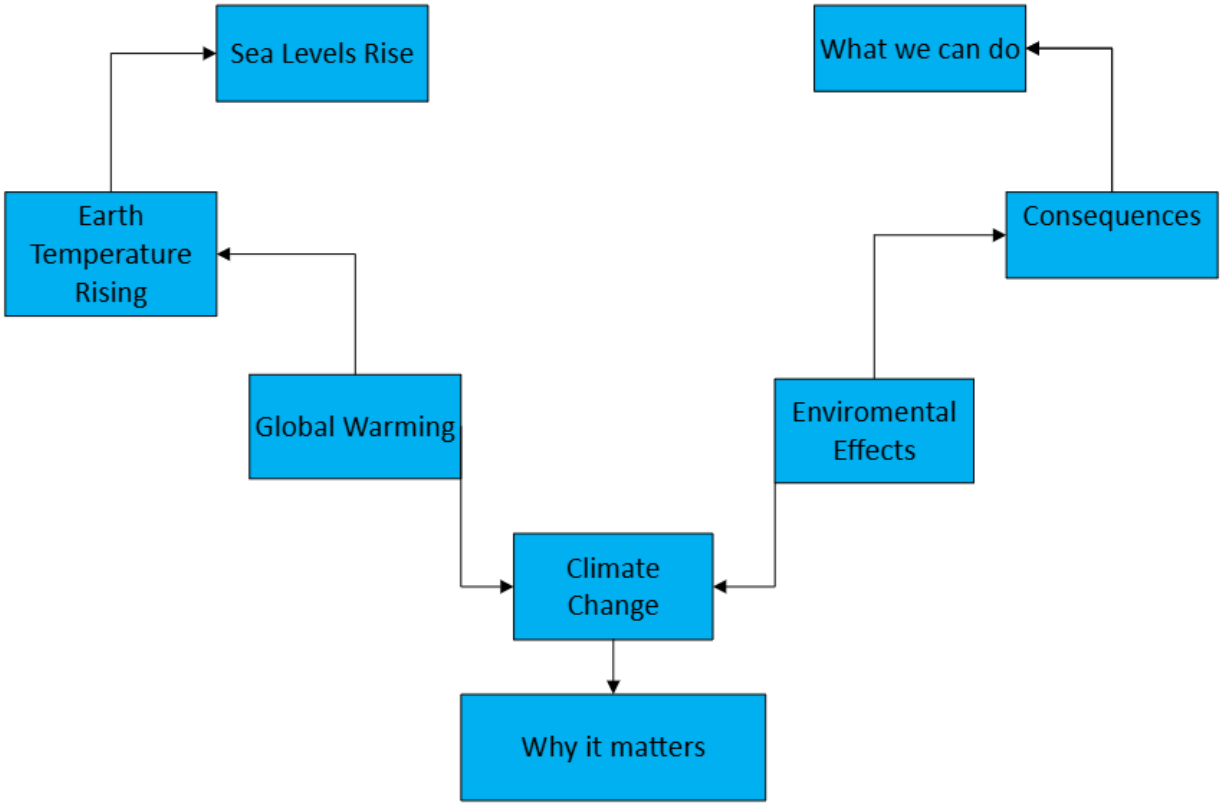
Target Audience and Purpose

1) Explain the target audience and purpose for the video.

The video is targeting an age group around 11-16, and it highlights the dangers of climate change, what we can do in order to combat it, and the impact it can have on our lives in the future.

Mind Map

2) Create a mind map (Spider Diagram) of the ideas you have for the video.



Sources Table

3) Collect images and add them to a sources table.

File name and extension	Asset	Source
GlobalWarming		https://www.timeforkids.com/wp-content/uploads/2018/08/GlobalWarming-HERO.jpg?w=1024
Sei_225011058		https://images.newscientist.com/wp-content/uploads/2024/10/09141155/SEI_225011058.jpg

WORKSHEET 2 - TAFLEN GWAITH 2
Task 1 (Part B) - Tasg 1 (Rhan B)

Timeline

1) Give a bullet point list of what will appear in the video and for how long.

0:00 - 0:5 | Part 1: The Intro
Visual: Fire
Text Title: Climate Change: What is it?

0:10 – 0:30 | Part 2: The Greenhouse
Visual: A simple drawing or video of a car with smoke or a factory.
Audio: Explain that pollution acts like a "blanket" around the Earth, trapping heat inside.

0:30 - 1:00 | Part 3: The Ice is Melting
Visual: Photos of ice and glaciers in Antarctica.
Audio: Mention that the heat is melting ice, which makes the ocean water rise. This is bad for cities near the beach.

1:00 – 1:30 | Part 4: - Crops
Visual: Pictures of crops and very dry grass
Audio: Explain that a warmer planet means more dangerous weather and harder times for farmers to grow food.

1:30 - 2:30 | Part 5 - What can we do?
Visual: Statistics, solar panels, wind turbines.
Audio: We can help by using less energy and protecting our trees.

2:30 - 3:00 | Part 6 – Impact on wildlife
Visual: Shots of animals
Audio: can help by using planting trees and flowers, etc.

3:00 - 3:15 | Part 7 – Outro
Visual: Shot of earth
Audio: Earth doesn’t have to be perfect, just persistent, start now.

Hierarchy Chart

2) Create a flow diagram to show the path of the video.

e.g.

Introduction

↓

Clip 1

↓

Explanation of climate change, how we cause it

↓

Effects on wildlife? (Maybe later)

↓

Effects on climate, water levels

↓

Real world examples

↓

Solutions / Preventions

↓

Conclusion, start now.

Test Plan

3) Create a test plan in readiness to test your video.

Test No.	Test Description	Expected result	Actual result	Retest result
1	Does video start when play pressed	Video starts	Pending	Pending
2	Is the audio too loud	Narration is clear	Pending	Pending
3	Do transitions between clips work properly	Smooth cut or fade	Pending	Pending
4	Are the subtitles readable?	Text is clear, and stays on screen long enough to road	Pending	Pending
5	Are the images and clips clear (not pixelated)	Both appear sharp and are easy for the user to see	Pending	Pending

WORKSHEET 3 - TAFLEN GWAITH 3
Task 1 (Part C) - Tasg 1 (Rhan C)

Storyboard

1) Using your ideas and assets create a storyboard for your global warming video.

Storyboard: Introduction
Visual: A shot of heavy fire and smoke engulfing a forest, for the audience to better understand the potential severity of the situation.

Storyboard: Fossil Fuels and Global Warming
Visual: A shot of heavy industrial plants and cargo ships, with massive plumes of smoke rising into the atmosphere. **Script 1:** Climate change occurs due to a shift in weather patterns on earth caused by us humans burning fossil fuels or coal, gas etc, which releases CO2

Storyboard: Glaciers to Coastal Impact
Visual 1: A slow, cinematic zoom into glaciers or Antarctica. **Script 1:** As the planet warms, the heat will melt glaciers from Antarctica, causing the water levels to rise, which poses a risk to people living on the coast.

Storyboard: Switching to Solar
Visual 1: A wide drone shot of a massive solar farm built over a body of water or land, showing clean energy production in action
Script 1: To fix the problems caused by fossil fuels, we have to change where we get our power. We have to switch to clean energy instead of fossi fuels. I chose to show this solar farm because it represents a move toward renewable energy that doesn't pump carbon into the atmosphere

Storyboard: Statistics
Script 1: Thankfully, most agree on switching to more eco friendly methods of producing power and energy.

Storyboard: Protecting our wildlife and nature
Visual 1: A beautiful shot of a deer standing calmly in a vibrant area, looking directly at the camera. The deer are healthy and thriveing, for now.
Script 1: It's not just sea levels and us that feel the impact, climate change impacts every species. Protecting our planet means protecting all life on it. We can do this by supporting local conservation efforts, planting our own trees and plants ecosystems. So protecting wildlife means protecting the future of our entire planet

Storyboard: Final Conclusion
Visual 1: A shot of planet Earth from space.
Script 1: Our earth doesn't need to be perfected, it just needs to be consistent, it's time to start now, all of us.

Alternative Ideas

1) Explain 2 other ideas you had?

2) Explain why you rejected these ideas?

1) One alternative idea I had was to focus on human contributions to global warming. This could include visuals of factories producing smoke, cars on busy roads emitting exhaust, and large-scale deforestation. The video could explain how these actions release greenhouse gases into the atmosphere and causing rising global temperatures. The second idea was to create a video dedicated for solutions to global warming. This could include renewable energy sources like solar panels and wind turbines, reforestation projects, and people making environmentally friendly choices, such as using public transport or reducing waste. The idea was to show that despite the seriousness of the problem, there are steps we can take to protect the planet. While I did mention quite a bit of this, I did not make a video dedicated around it, and instead focused on the environmental impacts of climate change as well.

2) I didn't choose the first idea because starting with human pollution and deforestation might make the video feel too negative or overwhelming for the younger audience. I wanted the opening scene to be simple and visually striking, showing the wildfires as a whole so that the audience could understand the scale of the problem. Focusing on human causes too early could distract from this. I didn't choose the second idea because showing solutions at the start could confuse the main message of the video.

WORKSHEET 4 - TAFLEN GWAITH 4
Task 1 (Part D) - Tasg 1 (Rhan D)

Create the Video

Must be within 3-5 minutes long

Features such as images, videos, transitions, sounds, effects, overlays must be used.

Sources Table

1) Using the sources table from worksheet 2, explain how each asset is fit for purpose.

File name and extension	Asset	Source	Fit for purpose
GlobalWarming		https://www.timeforkids.com/wp-content/uploads/2018/08/GlobalWarming-HERO.jpg?w=1024	This image is fit for purpose because it provides a strong emotional connection to the consequences of climate change. It clearly illustrates the physical reality of melting ice caps and habitat loss
Sei_225011058		https://images.newscientist.com/wp-content/uploads/2024/10/09141155/SEI_225011058.jpg	This image is fit for purpose because it identifies the cause of global warming, carbon emissions from fossil fuels.
AP25287357852822		https://www.motherjones.com/wp-content/uploads/2025/10/AP25287357852822.jpg?w=990	This image is fit for purpose because it provides a visual solution to the problem of fossil fuels. It illustrates modern renewable energy technology

201261971514905323_8		https://www.aljazeera.com/wp-content/uploads/2012/06/201261971514905323_8.jpeg?fit=770%2C513&quality=80	This asset is fit for purpose because it shows the immediate danger of rising global temperatures
ST012977151490456		https://www.pewresearch.org/sr_2023-08-09_climate-change_3-png/	This chart is fit for purpose because it provides statistical evidence that the majority of people support wind and solar power.
2512671151605323_1		https://www.istockphoto.com/video/wildlife-scene-beautiful-young-fallow-whitetail-deer-wild-mammal-animal-in-forest-gm1046020688-279897206	This image is fit for purpose because it shifts the focus to land-based wildlife conservation. It allows me to explain that climate change impacts all ecosystems, not just the water levels, food, and us.
Dg8UANbN		https://www.vecteezy.com/free-photos/earth-from-space	This asset is fit for purpose as an opening or closing visual. It provides a perspective on the topic, reminding the audience that climate change is a worldwide issue that affects our entire home planet earth

Testing

1) Using the test plan from Assignment 2 complete the actual result and any retest results.

Test No.	Test Description	Expected result	Actual result	Retest result
1	Does video start when play pressed	Video starts	Video successfully starts	**N/A**
2	Is the audio too loud	Narration is clear	Audio is balanced	**N/A**
3	Do transitions between clips work properly	Smooth cut or fade	Any transitions used are acceptable	**N/A**
4	Are the subtitles readable?	Text is clear, and stays on screen long enough to road	Subtitles are clear and readable, they follow the narrator	**N/A**
5	Are the images and clips clear (not pixelated)	Any images or videos appear sharp and are easy for the user to see	Videos and images are clear and are easy to see.	**N/A**
