M1 Criteria – List 4 applications on the Windows 10 computer that the user might use and state how these applications can improve the speed of productivity and what these improvements can achieve.

Application name	Modifications that can be made – features.	How they will improve productivity
Word	Mail Merge Auto Correct Headings and Footers Tables	Features such as mail merge can improve productivity by automatically inserting data into one template, which is a huge time saver, auto correct can help by fixing typos for frequently used phrases. Now autocorrect can streamline the writing process by automatically correcting any typos or capital errors as you type, and for structuring long documents the use of headings and footers centralizes information such as the page number, the document title or logos, and tables offer a good method for organizing complex information in a grid format.
Excel	Spreadsheets Macro	Productivity from macros can improve as they can automate repetitive tasks, reduce errors as they can execute long repetitive inputs in a fraction of a second compared to having to manually perform it, so they will free up time which can be used for other tasks. With spreadsheets they provide you with a powerful flexible environment for organizing and analysing data with the ability to automatically format and visualize data with charts and collaboration in real time.
Powerpoint	Transitions Animations Templates Designs	The listed features of Powerpoint are crucial for productivity as they can reduce the time required to create a professional looking presentation, with it's pre designed templates and themes it ensures it's always consistent and visually appealing whilst removing the need to individually format each slide, subtle transitions with animations create a smooth and professional shift between slides, this combination of efficient design tools and visual effects free up time and improve productivity
Outlook	Focused inbox Quick Steps Task integration Scheduled Send	The Focused Inbox in Outlook uses AI to prioritize important emails which filters out the less important ones so you can focus on high priority without disruption, the quick steps feature will save time by

		allowing the user to create one click shortcuts for multi step actions such as forwarding an email to someone or putting it in a specific folder.
