

Installation Request Form

Installation Requirement	Tested and confirmed
Windows 10 installed	
Correct date and time	
Background to architecture	
Screensaver to none	
Automatic updates for 8pm	
Set a restore point	
Install AVG 2013	
Install Panda AV configure to update AV at 3am everyday	
Perform an AV scan	
Install Office 2007	
Install SyncToy and backup sample data	
Create a registry backup	
Firewall enabled	
Drivers enabled	
English Keyboard and regional settings	
Windows 10 Fully Updated	

P2 Criteria

Explain the purpose and client requirements for the selected system. Look at the installation request form and discuss why each one has been asked for. Explain the benefits of each request and how it will help the user.

Summarise why you feel the computer is now fit for purpose and meets the users needs.

Windows Updates

Enhanced Security - Updates include patches that fix security vulnerabilities that people are able to exploit, Windows has dedicated malicious software removal updates that prioritize being able to detect the latest threats.

Continued Compatibility – Updating makes sure that apps and software will continue to work on your system, eventually your system will become incompatible with software

New Features – Windows Updates don't just improve security and "performance" improvements, you'll have access to the latest Windows features such as Co-Pilot, the new AI video editor Clipchamp to help improve productivity

Scheduling of Windows updates.

Updates Overnight – Scheduling updates will make Windows update your device during a time it finds suitable, for example you can allow them to update when you're away or overnight instead of disrupting you during the day.

Time Saving – A massive time saver for businesses with many computers so instead of having IT staff manually updating each computer they're scheduled to update overnight or during the weekends, which reduces disruption to the daily operations

Anti-virus software

Real Time Protection – Most anti-virus software has real time protection within, which monitors files you download and open in real time and then detects viruses without you having to manually run a scan, it will also scan files you've already downloaded.

Website Protection – Several anti-virus software has built in protection for fake websites that have been compromised and contain malicious software, and phishing and scam websites to prevent identity theft and fraud.

Anti- virus software updates

Detection against the latest threats – Keeping your AV Software up to date will ensure it's able to detect the latest viruses, people are constantly creating new viruses and updating your AV will allow it to identify these threats immediately.

Microsoft Office package

Massive library of Applications – The Office package is a massive suite of applications suitable for comes with Word, PowerPoint, Excel, Teams, OneDrive and so on, and it's a central hub for you to easily access all of these applications.

Microsoft Office service packs

Latest Features – Service packs will include the latest AI features such as AI assistance. For example, new service packs may enhance features like real-time grammar and style suggestions in Word, data pattern recognition in Excel, or smart presentation design tools in PowerPoint.

System restore point.

Data Backup – It'll automatically back up important system files, settings, and configurations. This feature allows users to revert their system to a previous state if something goes wrong such as a failed update, software installation error, or malware issue. While it doesn't back up personal files like documents or photos, it ensures that critical system components can be quickly restored.

SyncToy

Backup Personal Files - SyncToy is a free utility developed by Microsoft that allows users to easily back up and synchronize personal folders between different storage locations, such as between a computer and an external drive. It helps ensure that important documents, photos, and other files are safely copied and kept up to date.

Excel Macros

User Convenience - Excel Macros are powerful tools that allow users to automate repetitive tasks with Microsoft Excel. By recording actions or writing custom scripts, you can perform calculations, format data or generate reports instantly. This greatly improves efficiency and accuracy especially for businesses that handle large amounts of data.

Set correct time zone and date

System Accuracy - Setting the correct time zone and date on a computer is essential for maintaining system accuracy and reliability. It ensures that files, emails and scheduled tasks have the correct timestamps, which is important in business environments and online activities.

Windows 10 operating system

Reliable and User Friendly - Windows 10 is a operating system known for its balance of performance and security. It provides a familiar UI with features like the Start Menu and File Explorer making it accessible for beginners and professionals. Windows 10 supports a big range of software and hardware, as it is an older OS, which ensures compatibility across different devices. It also includes built-in security features such as Windows Defender, BitLocker and regular updates to protect against threats.

End of Life – Windows 10 has reached its end of life on October 14, 2025, meaning it will no longer receive security updates or new features. Businesses and users should plan their upgrade to Windows 11 or newer versions to ensure continued security, compatibility and access to modern features such as enhanced AI integration and improved performance.

Firewall

A Firewall is a security feature that helps protect your computer and network from unauthorized access. It monitors incoming and outgoing network traffic and blocks suspicious or harmful connections. By acting as a barrier between your device and the internet the firewall helps prevent hackers, malware and viruses from gaining access to your data.

Summary – what will the effect of these tasks have on the overall system?

The effect of these components is a reliable, secure and efficient system. The Windows 10 operating system provides a stable base, while the Microsoft Office collection offers integrated AI enhanced tools to boost efficiency. System protection is ensured through a backup approach, using System Restore Points for configurations and SyncToy for the files, allowing for quick recovery from errors or data loss. Overall, these tasks and tools result in an environment that maximizes productivity, protects the data, and ensures stability.

P3 Criteria

Produce an installation and maintenance plan. This will be compiled from the installation request form.

Software to be installed	Installation method and media	Serial number	Installation instructions	Configuration settings	Maintenance activities
Windows 10	ISO	N/A	Windows 10 Pro	UK Settings for language and keyboard, UK Time Zone	Windows updates regularly
Windows Updates	Built in	N/A	Ensure updates are enabled	Set to check daily	Check weekly updates are applied
Panda Anti-Virus	V Drive	N/A	Open the setup and install it	Enable real time protection, set to scan daily	Check to see if the scan has detected anything
Panda Anti-Virus Updates	Built in	N/A	Ensure updates are enabled	Check for updates, set to check daily	Check daily updates are applied
Office 2007	V Drive	Purchase a key	Open the installer and agree to terms of service	Check for updates but there will be none because it's old	Get a new one because its old
Microsoft Office Service Packs	Microsoft Support site	N/A	Open the install and download	None	None
System Restore Point	System Properties	N/A	Open System Properties and go to System Protection	Press configure button and turn on restore points	Frequently create restore points
SyncToy	Microsoft Download Centre	N/A	Download and run the installer	Set up folder pairings for sync	Run sync tasks regularly and verify backups

Excel Macros	Within Excel	N/A	Open Excel go to Enable Developer Tab then create or import macro	Set macro security level (enable/disable macros with notification)	Review macros for security; update scripts as needed
Set time and date	Windows Settings	N/A	Open settings go to time and language	Turn on “set time automatically” and adjust to correct time zone	Check time sync occasionally; ensure Windows Time service is running
Windows 10 Operating System	Installation Media	Purchase a key	Boot from installation media and follow instructions	Install updates and drivers	Run windows updates regularly
Firewall	Windows Settings	N/A	Built in not required	Open Windows Settings go to firewall and network and turn on	Check blocked apps

Test plan – again look at the installation request.

Create a plan for each request BUT remember you can only complete the first 3 rows at this stage.

- Windows 10 installed
- Correct date and time
- Background to architecture
- Screensaver to none
- Automatic updates for 8pm
- Set a restore point
- Install AVG 2013
- Install Panda AV configure to update AV at 3am everyday
- Perform an AV scan
- Install Office 2007
- Install Synctoy and backup sample data
- Create a registry backup

- Firewall enabled
- Drivers enabled
- English Keyboard and regional settings

This p – p5

Test number	Test description	Expected result	Actual result	Changes made if failed	Retest result
1	Install Windows 10	Windows will boot up correctly	Booted correctly	NA	1
2	Set a restore point	Windows will create a restore point	Windows will create a restore point	N/A	2
3	Install Office 2007	Office will install correctly and applications will load up.	Office has installed and is now asking for the serial key	Retrieve a serial key	3
4	Word	Word will start up and the user will be able to save a file.	Word has installed correctly	N/A	4
5	Excel	Excel will start up	Excel has installed correctly	N/A	5
6	Install SyncToy	SyncToy will install and start up correctly	SyncToy has installed correctly	N/A	6
7	backup sample data	Data will be backed up and restored successfully	Data was successfully backed up	N/A	7

M2 Criteria

Discuss 4.

For each piece of software you installed think of an alternative version and list the features of this version and the advantages and disadvantages it will bring. Explain why you discarded it. E.g. use the headings in the example below...

Alternative to windows 10 is windows 11

Newer features in Windows 11

Windows 11 includes a redesigned more modern user interface with centred taskbar icons, improved window snapping (Snap Layouts), better support for modern hardware, and enhanced security features such as TPM 2.0 and Secure Boot by default.

Advantages of Windows 11 are....

More modern and visually appealing interface

Improved security features

Better optimisation for newer CPUs and hardware

Enhanced multitasking features

Disadvantages of Windows 11 are...

Higher system requirements (need TPM 2.0, and be on supported CPU list)

Not compatible with older hardware

Some legacy software may not run correctly

Learning curve for users familiar with Windows 10

More bloatware

The reason I have not gone with Windows 11 is because...

Windows 10 was what I chose because it has bigger compatibility with older hardware and software, which is beneficial when running it via a Virtual Machine with limited resources. It is more stable for general use, widely supported and suitable for the system requirements of this setup. Using Windows 10 also reduces the risk of driver or software compatibility issues.

D2 Criteria

Is the system any good? Why?

Does it meet what the client wanted? Why?

Were we told what software to install? How did that adversely affect us?
